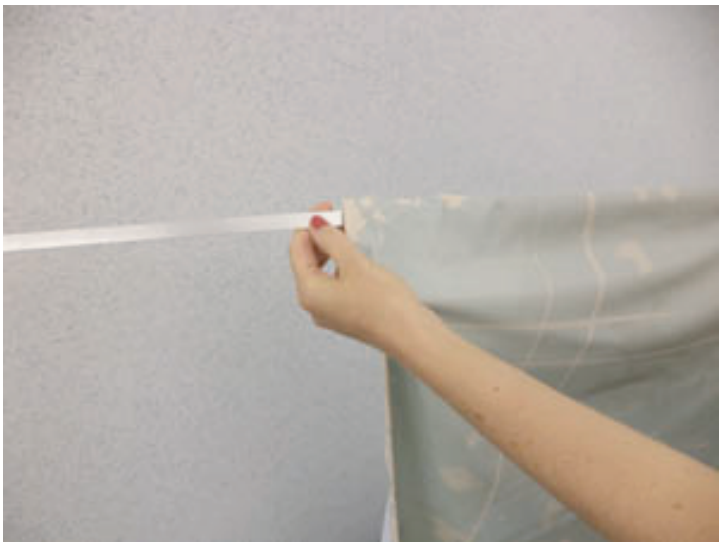
Installing Graphics into Truss Display

For the installation of graphics, you will need:
**Graphics *Top Clips *Bottom Clips *Aluminum Profile Bars*



Insert aluminum profile bar into the pocket along the top of the graphic, as shown.

Attach top clips as shown. Clips should secure over the fabric and aluminum profile bar. Once clips are in place, snap the open end over the bottom of the module so that the graphic hangs freely. Please note: Each kit contains enough top and bottom clips to secure all graphics. While there is no required amount of clips per graphic, larger graphics will require more clips than smaller graphics to secure in place.

Insert aluminum profile bar into the pocket along the bottom of the graphic, as shown.

Snap clips onto module as shown. Pull graphic and clip together and secure the clip over fabric and the aluminum profile bar. Once secure, the graphic and bottom clip should both be taut.
