

Cork: Stylish Sustainability

Renewable

Cork is made from the bark of cork oak trees, which renew themselves after each harvest. Our cork products are FSC (Forest Stewardship Council) certified, ensuring responsible, sustainable sourcing practices.

Zero-Waste

Cork can be recycled and is entirely biodegradable. When its useful life ends, it returns to the earth, leaving no harmful waste behind.

Durable

Cork is remarkable due to its unique honeycomb cellular structure. It's anti-microbial and resistant to water and extreme temperatures. Naturally flexible and lightweight, it can withstand compression and deformation.
