Assembly

1. Remove the lightbox frame from the case and swivel the feet to a 90° angle.
2. Gently pull upward to expand the lightbox frame (refer to circles below for correct hand placement).
3. Once fully expanded, insert the support bar into the notches of the frame.

4. Plug the power adaptor into the power cord.
5. Pull power cord out from the frame before installing the SEG panels.

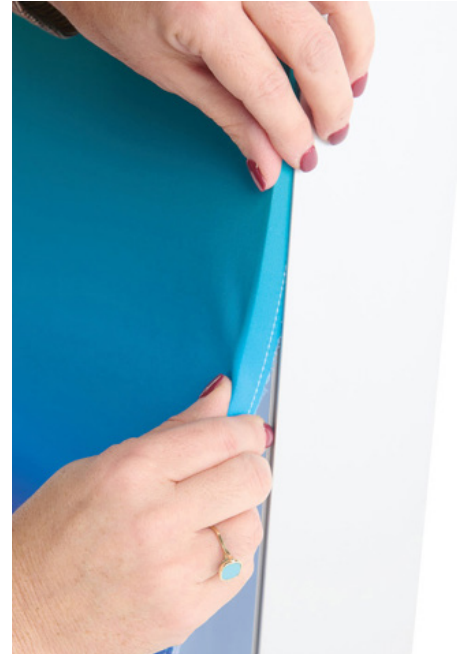

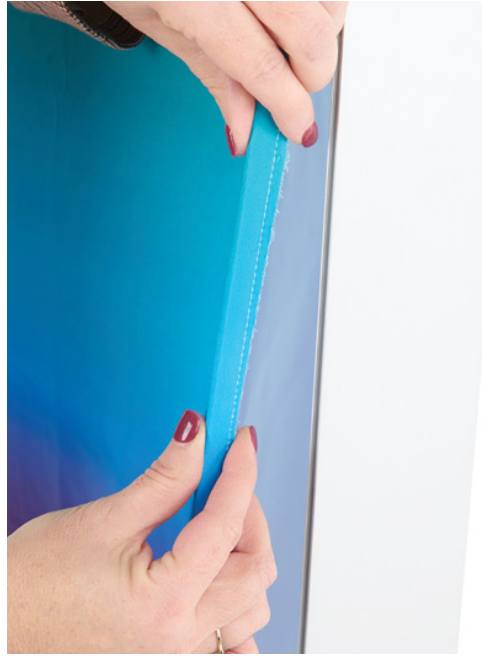

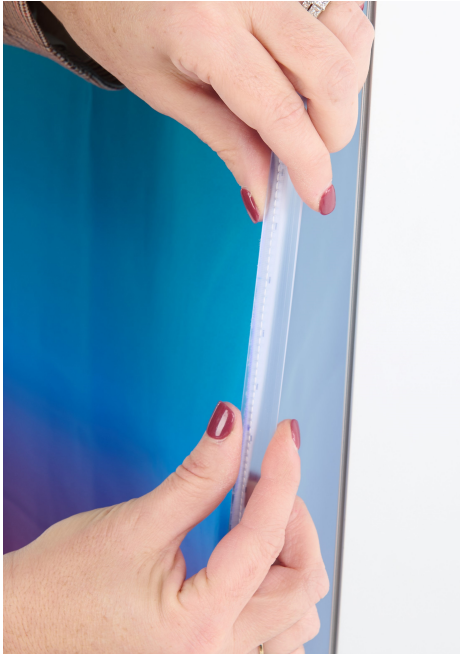

To disassemble the lightbox, first disconnect from power and remove the SEG panels and support bar. Place hands on the sides of the frame (refer to circles) and gently pull down to collapse the frame.

⚠ **CAUTION:** Pinch hazard! Keep hands clear of moving parts.

SEG Panel Installation

First, fold the plastic strip to a 90° angle and insert into front channel of the frame. Fold the fabric over the plastic so it does not show once inserted. Insert diagonal corners first, followed by the center of the channel. Then press the strip in, working towards the center until the SEG graphic is taut on all sides.

Link multiple displays via the magnetic sides of the frame.

Assembly is complete.
