Assembly

1. Expand the collapsed frame, making sure rubber stoppers are at bottom.

(Larger sizes require 2 people to safely expand the frame.)

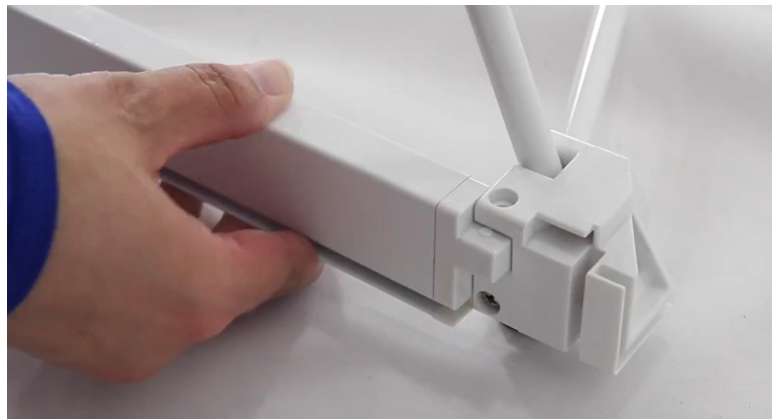

2. Click inner frame connections together to secure.

3. Insert the 4 side support pieces to the left and right sides of frame.

Note: Lay frame on floor to more easily reach the top of the unit.

4. Assemble all channel poles.

5. Connect channel poles to the corner brackets of frame. Channels on poles and frame brackets should align. Note the left and right indications printed on the poles.

6. Secure each channel pole by sliding the center slot onto the metal tabs on frame.

7. Attach metal feet to frame by aligning the back rubber stopper into the circular slot, then sliding backwards to insert the front rubber stopper into the slot.

8. Tip unit to standing position.

9. Unsnap each LED ladder and note the up and down sticker indications.

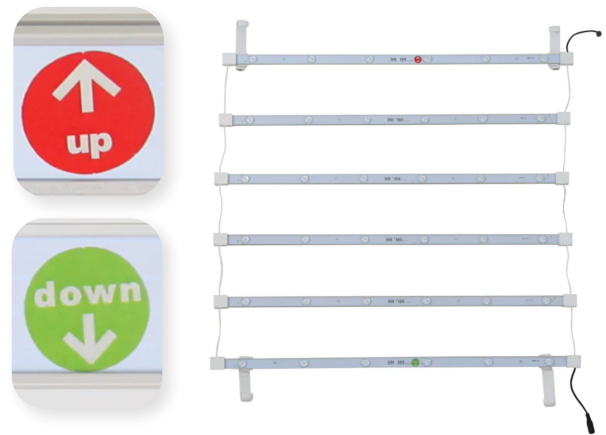

10. Hook each LED ladder onto trusses inside frame.

11. Snap power adaptor holders onto bottom trusses of frame, then insert the power adaptors.

12. Plug in LED ladder power cords for each column.

13. Plug in each column of LED ladders to the power adaptors.

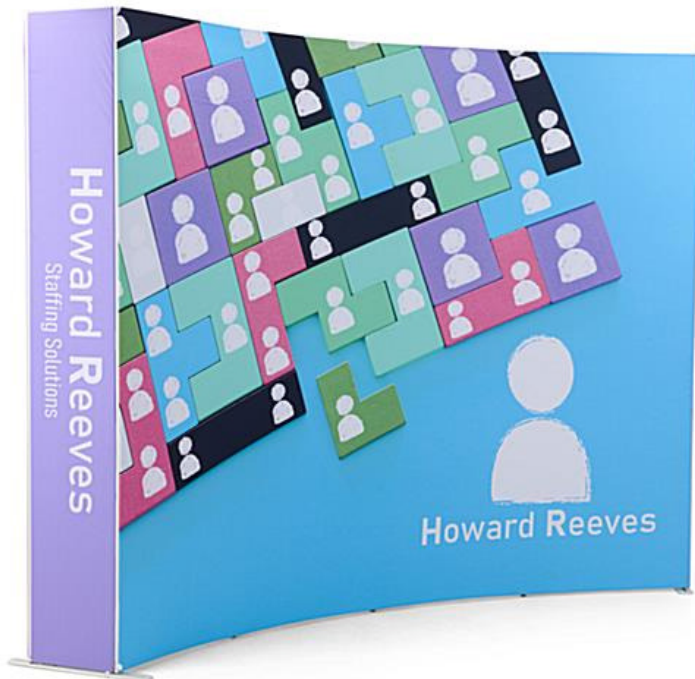

14. To attach custom fabric graphics, bend the plastic tab of the fabric to a 90 degree angle and insert into the frame channel. Start at one corner, then press-fit tab into channels working towards the center.

15. Repeat for each fabric graphic.

16. Plug in LED power adaptor cords.

Assembly is complete.
