

**Packing Information**

The Slatwall Tower Main Body is shipped in two separate boxes: The large box contains the laminated slatwall panel. The second box contains the black base, hardware and tool.

Both boxes should arrive together. If not, they were probably separated in transit and could arrive the next day. If they do not arrive, please call 1-800-572-2194 and we can help to trace shipment with carrier.

**Assembly Instructions (Base):**

1. To avoid scratching, carefully unpack tower unit and base on a carpeted floor, or throw-cloth near the display's final floor position and proceed to assemble the unit on its side.
2. Position and orient the Base Plate at the bottom of the slatwall panel with the bottom of the Base Plate facing out away from the panel body.
3. Locate the three screws at the bottom of the slatwall panel and remove. Locate the washers in the box with the Base Plate. Insert each of the three screws with washers through the black base and hand-thread into the bottom of slatwall. Secure the base by tightening all three screws with an Allen key.

Place the slatwall unit in its upright position on the floor. Install add-on pockets and frames at desired location by hooking into grooves.

For how to assemble the digital screen, please *instructions\_SMSBAB.pdf* for details.
