1. Snap and connect 2 side tubes to the full length. Insert the support tube into the holes in the middle of the side tubes, matching the numbers at the end of each part to assemble the whole frame. Snap 2 feet into the frame at the bottom corners.

2. Carefully lay the assembled frame on a flat and clean surface. Slide the printed fabric to cover the frame from the top.
3. Zip the fabric along the bottom tube to close the opening. Stretch out the fabric if any wrinkle is present. The assembly is finished.

4. Each frame has built-in magnets on both sides that you can easily build your own tower configuration. Simply replace the aluminum foot with black rubber foot and join the frames on the side to make the desired tower display.
