

APFLP Mounting Instructions

Each light box includes four metal plated binding screws, four mounting screws (with anchors), and a power adapter. The light boxes can be mounted in landscape or portrait orientation.

Wall Mounting:

To mount on a wall, drill four small holes to fit the anchors. Then place the metal plated stand-offs over the anchors and slide the tiny screws through the holes. Next, using a Phillip's head screwdriver (not included), turn the screws into the anchors as far as they will go, making sure the stand-offs are securely tightened to the wall.

Attach the light box by fastening the binding screws onto each corner. Finally, plug in the power adapter to illuminate the frame.
