

BSSCROLL Scrolling Banner Stand Assembly Instructions

****INSTALL BANNER FROM TOP TO BOTTOM TO AVOID STRETCHING YOUR BANNER****

Unfold the two telescoping poles and insert them into the holes in the base. Attach the top banner rail to the tops of the poles. There are screws on the poles that the banner rail hooks onto. See picture above.

Insert the first rotating bar through the loop in the banner. Raise the banner to connect it into the top rail as shown above. Next, take the second rotating bar and insert it into the loop of the banner at the bottom.

Place the rotating bar with the banner around it inside of the base. This bar does not connect to anything and simply hangs inside of the base. Place the base cover through the banner and connect it to the base. Use the switch to turn on the scrolling banner or to change the direction that your banner is rotating in. Click twice to change banner directions.
