

DSIGN8511 Template Instructions

This changeable Wall Sign product comes with 3 sheets each of printable clear or frosted film. Please note that the film is engineered for either photocopiers or laser printers, NOT inkjet printers.

Available in 3 formats, each template has an 8-1/2" x 11" field created in the file for you to input custom logos, graphics, and text. Once your design is completed we suggest printing a test on plain paper first. Hold up this test print against one of the supplied film sheets to visually inspect your layout against the lines of the scored field. This allows you the opportunity to make minor adjustments to your design before using up the supplied film.

Before printing, remove any of the die-cut circles from the film (you don't want them falling off inside your printer).

We ask that you pay attention to the settings on your copier or laser printer with regards to margins and media type. Always print your design at 100%. Do not scale or select "fit to printer". By following these guidelines the chances for print film rejects will be minimized.
