

Display wirelessly to Epson Projectors with Epson iProjection™

Epson iProjection is the wireless display solution for today's BYOD classrooms, boardrooms and workspaces. With true multi-platform support, users can wirelessly mirror content from Chromebooks, PCs and macOS®, iOS® and Android™ devices to Epson® projectors¹.

Plus, with the built-in Moderator function, available for Chromebooks, computers and mobile devices, up to 50 users can connect to the display simultaneously¹, sharing content from as many as four devices at a time. It's the perfect tool for displaying a variety of content—or for comparing work side by side.

All projected images simulated.

Display and Annotate

- Browser content
- Documents
- PDFs
- Photos and more

Advanced Functionality (available with select projectors)

- Two-way content sharing — push content from the projector to connected devices
- Real-time mobile camera display — use your device's camera like a document camera or Web cam

Device Management

- Wirelessly connect and manage up to 50 devices simultaneously¹
- Display content from up to four devices at a time on the screen

Full Chromebook™ Support

- Screen mirroring capabilities
- Display content from Google Docs™, Google Slides™ and Google Sheets™
- Display Web content from a Chrome™ browser

Contact:

¹ For wireless functionality, including via the Epson iProjection App, the projector must be configured on a network, either through the Ethernet port on the projector (check model specifications for availability) or via a wireless connection. Check your owner's manual to determine if a wireless LAN module must be purchased separately to enable a wireless connection. Not all Epson projectors are able to be networked. The Epson iProjection App does not support all files and formats. See www.epson.com/iprojection for details.
