

## 3035 Storage Cart Assembly:

The 3035 Storage Cart is shipped in four cartons. Make sure all for cartons are available.

- 1) Remove base from carton and place upside down onto a flat surface. Attach casters onto base by placing the wheel plate onto the platform located on all four ends of the base. Run the bolts through the washers, the holes and fasten with the lock washes and the nuts. Tighten securely.
- 2) Flip the base onto its wheels. Bolt the four uprights to the cart base. Do not tighten bolts!
- 3) Starting at the bottom, attach the tiers with the bolts, washers, lock washers, and nuts. Each tier is attached to the uprights with 8 sets of bolts, washers, lock washers and nuts. Make sure the tiers are oriented correctly to the base. The tiers must face the front and back of the base or the cart will not be able to fit thru a 34" wide door when loaded with stanchions.
- 4) Attach the top frame to the uprights. Securely tighten all of the nuts and bolt of the storage cart.

### Warning:

It is very important to load this cart from bottom to top, and un-load it from top to bottom. Failure to do this may result in top heavy loads that may eventually cause tipping of the cart & damage to the stanchions, the cart, and/or injury.
