

## Item #BG-6/SL-6

**Please read these instructions completely through once before attempting assembly.**

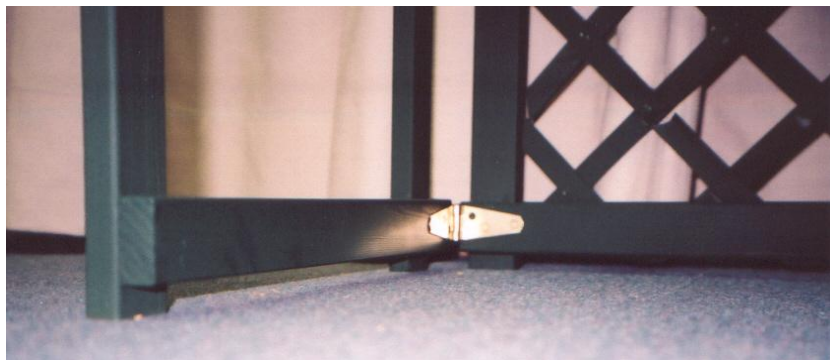

### Parts List

- 1 Top Half – 40” Tall
- 1 Bottom Half – 33 ¾” Tall
- 4 Shelves
- 8 ¾” Bolts
- 8 Insert Nuts
- 1 4 mm Allen Wrench\*\*

**\*\*If you plan to disassemble the unit in the future, please keep this allen wrench in a safe place. We will not be able to provide you a replacement. If you lose it, you can find one anywhere hardware is sold.**

Assembly of the unit consists of lining up the holes in the top half with the corresponding holes in the bottom half and attaching them together with the enclosed bolts and insert nuts. Please note that the bottom half is the short half and the top half is the tall half.

It is best to put the insert nuts on the inside of the unit and the bolts on the outside of the unit. This makes the bolts more accessible when you are tightening them with the enclosed allen wrench.

As you can see in the picture above, the bottom of the unit has a ½” lip under the lowest shelf support. (This is not a picture of the BG-6 or SL-6, but the construction is the same.)

After attaching the top half to the bottom half and tightening all bolts, put the shelves into place. To spread the shelves out equally like in the picture above, start at the bottom and place a shelf on every other level.
